

Luca Scofano

Senior AI Researcher

lscofano2@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Senior AI Researcher with extensive experience in multimodal learning, foundation models, and predictive systems. Expert in bridging the gap between deep theoretical research and scalable engineering challenges. Proven track record of designing innovative frameworks for human behavior modeling and anomaly detection, with 10+ publications in top-tier venues (ICLR, CVPR). Committed to establishing new standards for AI development in Europe through rigorous research and open-source contribution.

PROFESSIONAL EXPERIENCE

Senior AI Researcher

Feb. 2026 – Present

Translated

Rome, Italy

- Spearheading the design and training of multimodal foundation models from scratch, focusing on Distributed Video Processing Systems (DVPS) to enhance next-generation content translation.
- Bridging the gap between theoretical deep learning research and engineering at scale, optimizing training pipelines for high-performance computing environments.
- Driving initiatives to establish a new European standard for AI, moving beyond state-of-the-art baselines to create robust, industrial-grade generative models.

Postdoctoral Researcher in AI, Neuroscience Focus

Apr. 2025 – Jan. 2026

Sapienza University of Rome

Rome, Italy

- Developed an interpretable framework to model high-dimensional neural data, successfully uncovering hidden neural patterns in complex datasets.
- Collaborated with neuroscience faculty to integrate experimental brain data into AI-driven frameworks, enhancing cross-disciplinary research outputs.
- Engineered end-to-end AI pipelines for data preprocessing, neural feature extraction, and rigorous model validation.

AI Researcher (Contractor)

Jan. 2025 – Jun. 2025

Sapienza University of Rome & Yocabe srl

Rome, Italy

- Led full-cycle development for an online marketplace return-rate prediction algorithm, directly impacting inventory logistics.
- Collected, curated, and analyzed large-scale transactional datasets to identify key behavioral indicators.
- Engineered features and trained predictive models to forecast return rate probabilities with high accuracy.

AI Researcher (Visiting Role)

May 2024 – Oct. 2024

TU Darmstadt

Darmstadt, Germany

- Built and optimized machine learning models for embodied AI applications.
- Collaborated with a cross-functional team to deploy scalable solutions using graph neural networks.

Teaching Assistant

Sep. 2022 – Feb. 2024

Sapienza University of Rome

Rome, Italy

- Mentored over 50 students in advanced machine learning techniques, ensuring practical application to real-world datasets.

EDUCATION

Sapienza University of Rome

Rome, Italy

Ph.D. in Data Science

Nov. 2021 – Jan. 2025

- Developed AI-driven solutions for human behavior modeling, including predictive systems for motion forecasting and procedural mistake detection.
- Implemented multimodal machine learning frameworks leveraging graph neural networks and topological data analysis.

- Published 10+ papers in top-tier venues (e.g., ICLR, CVPR, WACV, BMVC) and collaborated with international research institutions.
- Mentored junior researchers, fostering an environment of collaborative problem-solving and technical excellence.

Sapienza University of Rome

Rome, Italy

M.Sc. in Data Science

Nov. 2019 – Nov. 2021

- Thesis: Implemented an AI model for forecasting player movement in professional sports settings.

Sapienza University of Rome

Rome, Italy

B.A. in Economics

Nov. 2016 – Nov. 2019

SELECTED PROJECTS AND PUBLICATIONS

Presented a reinforcement learning-based robot navigation model leveraging latent social dynamics, enabling real-time human interaction awareness in **ICLR 2025 Spotlight (top 5.1% of submissions)**. [\[Paper Link\]](#)

Proposed a framework for estimating social interactions and human meshes using egocentric video. Published as *Social EgoMesh Estimation* in **WACV 2025**. [\[Paper Link\]](#)

Developed a real-time procedural mistake detection system integrated into workflows for video-based quality assurance. Published at **CVPR 2024**. [\[Paper Link\]](#)

Designed a staged contact-aware model for human motion forecasting, achieving 15% higher accuracy compared to baseline methods. Published in **BMVC 2023**. [\[Paper Link\]](#)

Contributed to **TopoX**, an open-source Python package for topological machine learning, widely adopted by researchers. [\[GitHub Link\]](#)

SKILLS

Core AI Expertise: Multimodal ML, Graph Neural Networks (GNN), Predictive Modeling, Foundation Models, NLP.

Programming Languages: Python, SQL, R.

Machine Learning Frameworks: PyTorch, TensorFlow, Keras, PyTorch Geometric.

Tools & Platforms: Docker, Git, Pandas, NumPy, Matplotlib, Distributed Computing (Multi-GPU).

Languages: Italian (Native), English (Full Professional).
